Main Ideas/Questions	Notes/Examples	
<h2 style="text-align: center;">HYPERBOLAS</h2> 	<p>An hyperbola is a set of points such that the difference of the distances from any point on the hyperbola to two fixed points remains constant. These fixed points are called the foci.</p> <p style="text-align: center;"><u>$d_1 - d_2$</u> remains constant for all points on the hyperbola!</p> 	
<h2 style="text-align: center;">TYPES OF HYPERBOLAS</h2>	<p>HORIZONTAL (opens left and right)</p> 	<p>VERTICAL (opens up and down)</p> 
<h2 style="text-align: center;">STANDARD FORM</h2> <p style="text-align: center;">Center at (h, k)</p>	$\frac{(x-h)^2}{a^2} - \frac{(y-k)^2}{b^2} = 1$	$\frac{(y-k)^2}{a^2} - \frac{(x-h)^2}{b^2} = 1$
<h2 style="text-align: center;">Equations of ASYMPTOTES</h2>	$y = \pm \frac{b}{a}(x-h) + k$	$y = \pm \frac{a}{b}(x-h) + k$
<h2 style="text-align: center;">GRAPHING HYPERBOLAS</h2>	<ul style="list-style-type: none"> ✓ Write the equation in standard form. ✓ Graph the center, (h, k). ✓ Graph the vertices. Use the first denominator, a. ✓ Graph the co-vertices. Use the second denominator, b. ✓ Use the formula $c^2 = a^2 + b^2$ to find and graph the foci. ✓ Write equations for the asymptotes and graph them. 	

Directions: Graph each hyperbola. Identify the center, vertices, co-vertices, foci, and asymptotes.

1. $\frac{x^2}{4} - \frac{y^2}{9} = 1$

$a^2 = 4$ $b^2 = 9$
 $a = \pm 2$ $b = \pm 3$

$c^2 = a^2 + b^2$
 $c^2 = 4 + 9$
 $\sqrt{c^2} = \sqrt{13}$
 $c = \pm 3.6$

Center: $(0,0)$
 Vertices: $(2,0)$ $(-2,0)$

~~Co-Vertices:~~

Foci: $(3.6, 0)$ $(-3.6, 0)$

Asymptotes: $y = \pm \frac{3}{2}(x-0) + 0$
 $y = \pm \frac{3}{2}x$

2. $\frac{y^2}{36} - \frac{x^2}{1} = 1$

$a^2 = 36$ $b^2 = 1$
 $a = \pm 6$ $b = 1$

$c^2 = 36 + 1$
 $c^2 = 37$
 $c = \pm 6.1$

Center: $(0,0)$
 Vertices: $(0,6)$ $(0,-6)$

~~Co-Vertices:~~

Foci: $(0,6.1)$ $(0,-6.1)$

Asymptotes: $y = \pm \frac{6}{1}(x-0) + 0$
 $y = 6x$ & $y = -6x$

3. $\frac{(x-3)^2}{25} - \frac{(y-2)^2}{16} = 1$

$a^2 = 25$ $b^2 = 16$
 $a = \pm 5$ $b = \pm 4$

$(3 \pm 5, 2)$
 $c^2 = 25 + 16$
 $\sqrt{c^2} = \sqrt{41}$
 $c = \pm 6.4$

$(3 \pm 6.4, 2)$

Center: $(3,2)$
 Vertices: $(8,2)$ $(-2,2)$

~~Co-Vertices:~~

Foci: $(9.4, 2)$ $(-3.4, 2)$

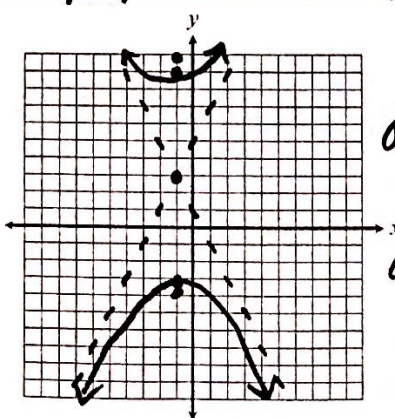

Asymptotes: $y = \pm \frac{4}{5}(x-3) + 2$
 $y = \frac{4}{5}x + 4.4$ & $y = -\frac{4}{5}x - 0.4$

4. $\frac{(y-3)^2}{36} - \frac{(x+1)^2}{9} = 1$

$a^2 = 36$ $b^2 = 9$
 $a = \pm 6$ $b = \pm 3$

$(-1, 3 \pm 6)$
 $c^2 = 36 + 9$
 $c^2 = 45$
 $c = \pm 6.7$

$(-1, 3 \pm 6.7)$

Center: $(-1,3)$
 Vertices: $(-1,9)$ $(-1,-3)$

~~Co-Vertices:~~

Foci: $(-1, 9.7)$ $(-1, -3.7)$

Asymptotes: $y = \pm \frac{6}{3}(x+1) + 3$
 $y = 2x + 5$ & $y = -2x + 1$
